

Treatments

Time, age and everyday life leave traces on all of us. Sometimes nature needs a little help. Together we will find the right treatment.

Botulinum Toxin

In the course of life, facial wrinkles appear on the face, which are caused by active muscle movements. Botox leads to the relaxation of these muscles and subsequently also to the smoothing of the overlying skin. The effects of Botulin toxin appear a few days after the injection and unfold over the next two weeks. After this time, the full effect can be seen. Whether the wrinkles are removed entirely depends on the depth of the wrinkles. Treatment must be continued for deeper wrinkles. Combination with other treatments are also possible.

BOTULINUM IS USED FOR:

mimic wrinkles – frown lines, crow's feet (lateral eye wrinkles), forehead lines
drooping corners of the mouth
cobblestone chin
migraine
hyperhidrosis (excessive sweating, especially in the armpit area)

Hyaluronic Acid

Hyaluronic acid occurs naturally in the body and is very well tolerated. With fillers with cross-linked hyaluronic acid, not only superficial but also deep wrinkles can be filled; the lost volume is regained and the face can be gently modeled. Hyaluronic acid has the ability to bind fluids in the body and thus makes the skin look plumper and firmer. The effect is immediately visible. Small bruises and swellings (especially after lip injections) can occur.

HYALURONIC ACID IS USED FOR:

wrinkle reduction – marionette wrinkles, nasolabial folds, upper lip wrinkles, lip volume build-up, lip contour enhancement, mouth corner elevation
reduction of dark circles, Face modeling – cheeks, chin, jawline
nose shape correction, reduction of the nasal hump
revitalization of the volume on the back of the hand
revitalization of the skin on the face, neck and décolleté

Profilo®

Profilo® is the freshness booster for your tired, dehydrated and slack skin. The treatment serves to intensively hydrate and remodel the skin. With the highly concentrated hyaluronic acid, the skin is supplied with moisture from the inside, which makes it look plumper and fresher. Small creases disappear. The body's own hyaluronic acid production is stimulated, and elastin and collagen synthesis is supported. The quality of the skin is sustainably improved, and skin aging is noticeably and visibly slowed down. Optimally, 2 treatments every 4 weeks are recommended, followed by a refresher after 6-8 months.

PROFILO IS USED FOR:

improvement of the structure, elasticity and moisture of the skin on the face, neck and décolleté
on the upper arms, hands
reduction of wrinkles

PRP autologous blood plasma

PRP autologous blood plasma therapy (Platelet Rich Plasma), also known as vampire lifting, is an effective and natural method for skin rejuvenation on the face and on the body. In order to obtain PRP, the venous blood is first taken. During the subsequent centrifugation, the blood components are separated. The platelet-rich plasma (PRP) contains particularly high amounts of growth factors and proteins, which are injected into the skin with a fine needle. This naturally stimulates skin renewal and prevents premature aging. PRP is also used to stimulate hair growth. Active ingredients stimulate the regeneration of the scalp.

PRP IS USED FOR:

skin rejuvenation and renewal: face, neck, décolleté
natural wrinkle reduction
reduction of dark circles
scar treatment
promote hair growth
scar therapy

Aesthetic Mesotherapy

Aesthetic mesotherapy is used preventively and regeneratively at the first signs of aging. Through microinjections of individually composed active ingredients, the skin is optimally supplied with moisture and vitamins, which makes it shine. We also know this effect as mesoglow. We achieve an even stronger effect through a combination treatment with autologous blood plasma (PRP). I recommend a series of at least 3-4 treatments to achieve a lasting effect.

AESTHETIC MESOTHERAPY IS USED FOR:

fine wrinkles
large pore skin; tired, dull skin;
skin damaged by sun, smoking
pigment spots
hair loss
stretch marks
scar reduction

Aesthetic Acupuncture

Facial acupuncture from traditional Chinese medicine manages to positively influence the external appearance of skin in a natural way, without animal experiments or side effects, and almost painlessly but extremely effectively. The facial expressions remain unrestricted. By applying stimuli with fine needles, wrinkles are gently smoothed out after just 30 minutes. The renewal processes of the skin are stimulated, the facial contours are gently tightened. The skin shines again due to the improved blood circulation.

AESTHETIC ACUPUNCTURE IS USED:

for natural wrinkle treatment
for gentle tightening
for a radiant complexion – stimulates the cell metabolism, promotes blood circulation
to reduce swelling and water retention
to relax muscle tension

PDO Thread

Without a scalpel and only with the PDO threads, which are broken down by the body after a few months, you can benefit from an immediate gentle lifting and revitalization of the skin. The threads are inserted into the subcutaneous fatty tissue using needles or cannulas. There they stimulate the skin's own collagen synthesis, the skin appears plumper and firmer. With the help of the lifting threads, for example, the cheeks can be raised to their original position.

WHERE ARE THE PDO THREADS USED:

in the side and under the eyes
in the cheek area
for nasolabial folds
with drooping corners of the mouth, upper lip wrinkles
in the neck area
The treatment arms

Fat Dissolving Injection

Fat-dissolving-injection (injection lipolysis) is used for dissolution of small fat deposits. The active ingredient in the syringe is desoxycholic acid, a secondary bile acid that also occurs naturally in the human body and plays a crucial role in fat digestion. The agent is injected into the fatty tissue with a fine needle; the fat cells are destroyed and no longer reproduce. The treatment is almost painless as the syringe contains an anesthetic. The first results are visible after 3-4 weeks. Depending on the size of the fat deposits, several treatments are necessary.

FAT-DISSOLVING-INJECTION IS USED TO DISSOLVE SMALL FAT DEPOSITS:

on the chin and on the cheeks
on the upper arms
on the stomach, hip
with saddlebags

Chemical Peelings

With the help of chemical peelings, the dead skin cells are removed, the pores are deeply cleansed and the skin is smoothed. The gray haze is removed, the complexion is revitalized and immediately appears more even. Not all chemical peels are created equal. There are many strengths, ingredients, modalities, depths, and types. They are adapted to your individual skin characteristics and your requirements every time. For example, wrinkles or pigment spots can be reduced, blemishes or acne can be treated.

A series of treatments every 2-4 weeks is recommended. Since the skin is particularly sensitive to light after a chemical peel, a sun-screen with a high sun protection factor 50+ should be applied afterwards.

CHEMICAL PEELING IS USED TO TREAT:

tired, dull skin
fine wrinkles
pigment spots, sun damage
scars
blemishes, acne
